

Compact Controlled Rate Freezer

Kryo 370

Controlled temperature reduction prevents the formation of lethal intracellular ice: the Kryo 370 significantly improves viability yield post-thaw and is ideal for small sample sizes.

Accurate control, safety features and sample history data logging make these freezers world-class leaders.

The Kyro 370 range is simple to programme and operate, with the controller displaying demand, sample and chamber temperatures.

Whether you wish to freeze up to 60 straws or 45 vials, the freezers produce repeatable, consistent results with easy data recording thanks to PC comms port.

Batch freezing is possible using our DeltaT software.

Large sample numbers can be deposited in different machines with the subsequent freezing profile for all samples being displayed on the same graph.

The new MR7 controller offers password-controlled access on multiple user levels. Updates and alerts are emailed via WiFi to provide peace of mind and unlimited freezer profile storage enabling the operator to select optimum processing conditions.

Additional safety features have been fitted to help protect against power and PC failure. Optimised for different cell types user definable freezing profiles

Assured cryopreservation - inbuilt alarms and user notifications

QA support - password protection, reporting and temperature graphs

Flexible design - horizontal or vertical freezing options

Post thaw viability up by 20% compared to non-dynamic freezing methods
